

Tic Tac Toe

Run the Programm class in the Project

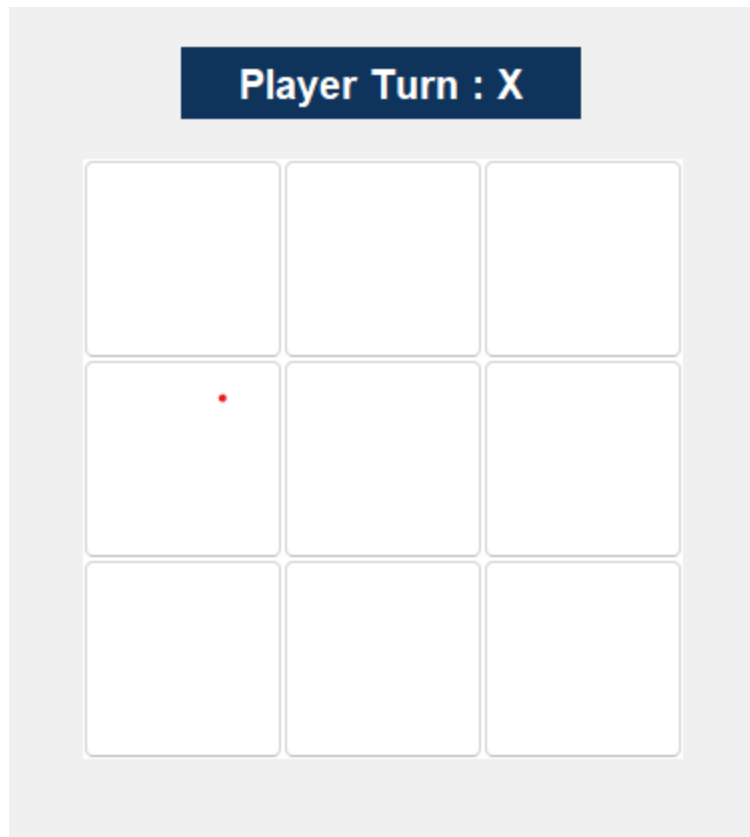

The View is Shown below with the modes in Tic Tac Toe

Functionalities Built :

Player vs Player is the mode where 2 people can play in the same device interacting with the UI

You can select the grid according to your choice by entering the value and creating grid.

In Player vs AI mode

The Player can play the first turn as always and then the computer will put its value at a place

The other two modes on the network are still in development.

The winning list is built according to the grid size as a logic which is compared to the

User inputs and according to the button clicks that list is compared
